

Chapter 18: Colors

Section 18.1: currentColor

`currentColor` returns the computed color value of the current element.

Use in same element

Here `currentColor` evaluates to red since the `color` property is set to `red`:

```
div {  
  color: red;  
  border: 5px solid currentColor;  
  box-shadow: 0 0 5px currentColor;  
}
```

In this case, specifying `currentColor` for the border is most likely redundant because omitting it should produce identical results. Only use `currentColor` inside the border property within the same element if it would be overwritten otherwise due to a more specific selector.

Since it's the computed color, the border will be green in the following example due to the second rule overriding the first:

```
div {  
  color: blue;  
  border: 3px solid currentColor;  
  color: green;  
}
```

Inherited from parent element

The parent's color is inherited, here `currentColor` evaluates to 'blue', making the child element's border-color blue.

```
.parent-class {  
  color: blue;  
}  
  
.parent-class .child-class {  
  border-color: currentColor;  
}
```

`currentColor` can also be used by other rules which normally would not inherit from the color property, such as `background-color`. The example below shows the children using the color set in the parent as its background:

```
.parent-class {  
  color: blue;  
}  
  
.parent-class .child-class {  
  background-color: currentColor;  
}
```

Possible Result:

Section 18.2: Color Keywords

Most browsers support using color keywords to specify a color. For example, to set the color of an element to blue, use the **blue** keyword:

```
.some-class {
  color: blue;
}
```

CSS keywords are not case sensitive—**blue**, **Blue** and **BLUE** will all result in **#0000FF**.

Color Keywords

Color name	Hex value	RGB values	Color
AliceBlue	#F0F8FF	rgb(240,248,255)	
AntiqueWhite	#FAEBD7	rgb(250,235,215)	
Aqua	#00FFFF	rgb(0,255,255)

Turquoise	#40E0D0	rgb(64,224,208)	
Violet	#EE82EE	rgb(238,130,238)	
Wheat	#F5DEB3	rgb(245,222,179)	
White	#FFFFFF	rgb(255,255,255)	
WhiteSmoke	#F5F5F5	rgb(245,245,245)	
Yellow	#FFFF00	rgb(255,255,0)	
YellowGreen	#9ACD32	rgb(154,205,50)	

In addition to the named colors, there is also the keyword **transparent**, which represents a fully-transparent black:
`rgba(0, 0, 0, 0)`

Section 18.3: Hexadecimal Value

Background

CSS colors may also be represented as a hex triplet, where the members represent the red, green and blue components of a color. Each of these values represents a number in the range of 00 to FF, or 0 to 255 in decimal notation. Uppercase and/or lowercase Hexadecimal values may be used (i.e. #3fc = #3FC = #33ffCC). The browser interprets #369 as #336699. If that is not what you intended but rather wanted #306090, you need to specify that explicitly.

The total number of colors that can be represented with hex notation is 256^3 or 16,777,216.

Syntax

```
color: #rrggbb;  
color: #rgb
```

Value	Description
rr	00 - FF for the amount of red
gg	00 - FF for the amount of green
bb	00 - FF for the amount of blue

```
.some-class {  
  /* This is equivalent to using the color keyword 'blue' */  
  color: #0000FF;  
}  
  
.also-blue {  
  /* If you want to specify each range value with a single number, you can!  
     This is equivalent to '#0000FF' (and 'blue') */  
  color: #00F;  
}
```

[Hexadecimal notation](#) is used to specify color values in the RGB color format, per the [W3C's 'Numerical color values'](#).

There are a lot of tools available on the Internet for looking up hexadecimal (or simply hex) color values.

Search for "**hex color palette**" or "**hex color picker**" with your favorite web browser to find a bunch of options!

Hex values always start with a pound sign (#), are up to six "digits" long, and are case-insensitive: that is, they don't care about capitalization. #FFC125 and #ffc125 are the same color.

Section 18.4: rgb() Notation

RGB is an additive color model which represents colors as mixtures of red, green, and blue light. In essence, the RGB representation is the decimal equivalent of the Hexadecimal Notation. In Hexadecimal each number ranges from 00-FF which is equivalent to 0-255 in decimal and 0%-100% in percentages.

```
.some-class {  
  /* Scalar RGB, equivalent to 'blue'*/  
  color: rgb(0, 0, 255);  
}  
  
.also-blue {  
  /* Percentile RGB values*/  
  color: rgb(0%, 0%, 100%);  
}
```

Syntax

```
rgb(<red>, <green>, <blue>)
```

Value	Description
<red>	an integer from 0 - 255 or percentage from 0 - 100%
<green>	an integer from 0 - 255 or percentage from 0 - 100%
<blue>	an integer from 0 - 255 or percentage from 0 - 100%

Section 18.5: rgba() Notation

Similar to rgb() notation, but with an additional alpha (opacity) value.

```
.red {  
    /* Opaque red */  
    color: rgba(255, 0, 0, 1);  
}  
  
.red-50p {  
    /* Half-translucent red. */  
    color: rgba(255, 0, 0, .5);  
}
```

Syntax

```
rgba(<red>, <green>, <blue>, <alpha>);
```

Value	Description
<red>	an integer from 0 - 255 or percentage from 0 - 100%
<green>	an integer from 0 - 255 or percentage from 0 - 100%
<blue>	an integer from 0 - 255 or percentage from 0 - 100%
<alpha>	a number from 0 - 1, where 0.0 is fully transparent and 1.0 is fully opaque

Section 18.6: hsl() Notation

HSL stands for **hue** ("which color"), **saturation** ("how much color") and **lightness** ("how much white").

Hue is represented as an angle from 0° to 360° (without units), while saturation and lightness are represented as percentages.

```
p {  
    color: hsl(240, 100%, 50%); /* Blue */  
}
```

Syntax

```
color: hsl(<hue>, <saturation>%, <lightness>%);
```

Value	Description
<hue>	specified in degrees around the color wheel (without units), where 0° is red, 60° is yellow, 120° is green, 180° is cyan, 240° is blue, 300° is magenta, and 360° is red
<saturation>	specified in percentage where 0% is fully desaturated (grayscale) and 100% is fully saturated (vividly colored)
<lightness>	specified in percentage where 0% is fully black and 100% is fully white

Notes

- A saturation of 0% always produces a grayscale color; changing the hue has no effect.
- A lightness of 0% always produces black, and 100% always produces white; changing the hue or saturation has no effect.

Section 18.7: hsla() Notation

Similar to hsl() notation, but with an added alpha (opacity) value.

```
hsla(240, 100%, 50%, 0)    /* transparent */
hsla(240, 100%, 50%, 0.5) /* half-translucent blue */
hsla(240, 100%, 50%, 1)   /* fully opaque blue */
```

Syntax

```
hsla(<hue>, <saturation>%, <lightness>%, <alpha>);
```

Value	Description
<hue>	specified in degrees around the color wheel (without units), where 0° is red, 60° is yellow, 120° is green, 180° is cyan, 240° is blue, 300° is magenta, and 360° is red
<saturation>	percentage where 0% is fully desaturated (grayscale) and 100% is fully saturated (vividly colored)
<lightness>	percentage where 0% is fully black and 100% is fully white
<alpha>	a number from 0 - 1 where 0 is fully transparent and 1 is fully opaque
